

Topic: Defending Against DDos Attacks On the Cloud

Abstract: In this session, we will address the current threat landscape, present DDoS attacks that we have seen on the cloud, and discuss the methods and technologies we use to protect cloud services. You will leave this session with a better understanding of:

- DDoS attacks on the cloud as well as the actual threats and volumes that we typically see.
- What AWS does to protect our services from these attacks.
- How this all relates to the AWS Shared Responsibility Model.
